

# *We believe in green energy*

YESTERDAY, TODAY AND TOMORROW

Since 1994, we have been working with enthusiasm and drive to advance the energy transition in our country with the help of technological innovations. We focus on a holistic energy supply from generation to storage to the efficient use of energy. For this, we realise future-oriented, sustainable energy solutions – together with our team and our partners. WIND-projekt is determined to meet the challenges of the energy transition. We are convinced that the responsible use of resources paves the way for a better future.

*Our heart beats  
for renewable  
energies.  
From the region,  
for the region.*
